EDUCATION

B.E. Information Technology | Thadomal Shahani Engineering College, Bandra
Third Year | 2024 – 2028 | CGPA 9.12

SKILLS

Programming Languages: Python, C++, Java, JavaScript, TypeScript

Frontend Development: React.js, Next.js, Three.js, Electron, JavaFX

Backend Development: Django, Flask, FastAPI, Node.js, Express.js

Databases: MySQL, SQLite, PostgreSQL (pgvector, HNSW indexing), MongoDB, Drizzle ORM

Cloud and DevOps: Git, GitHub, Docker, Google Cloud Services, Amazon Web Services

AI Tools: Gemini API (Google AI Studio), HuggingFace, Transformers

EXPERIENCE

ElevanceSkills Technologies | December 2025 – January 2026

Full Stack Web Developer Intern

- Developed BookMySeat (BookMyShow like webapp) movie ticket booking platform using Django.
- Implemented concurrency control, session caching, authentication, payment gateway integration and email confirmations.
- Built an admin panel with analytics dashboards and movie management features.

ESPECA Technologies | July 2025 – October 2025

Technical Project Manager Intern

- Led a team of seven developers using ClickUp for project coordination.
- Contributed to backend development using Flask, FastAPI and MySQL.
- Designed REST APIs and optimized database queries for better application performance.

TSEC CodeStorm | April 2025 – Present

Technical Team Member

Ai+ Smartphone | December 2025 – May 2026

Student Ambassador / Insider

PROJECTS

Citioyen | [Github](#)

- Built an AI-powered civic issue reporting platform for transparent reporting and tracking of infrastructure issues.
- Integrated Gemini API for issue categorization, severity scoring, and AI-assisted resolution verification with human override.
- Implemented pgvector (HNSW) duplicate detection and deployed a containerized React 19, Express 5, TypeScript stack on Google Cloud Run with Cloud SQL.

MAArK Privacy-First Search Engine and Browser | [Github](#)

- Led backend development of a privacy-first desktop browser using Java, Maven, JavaFX, and an Electron IPC bridge.
- Architected triple-tier IP masking with elite proxy rotation, real-time IP verification, per-tab session isolation, and anti-fingerprinting defenses.
- Built DOM-level ad/tracker blocking, breach detection via HaveIBeenPwned, and filesystem-level multi-profile sandboxing.

Codered IO | codered-io.onrender.com

- Built a browser-based arcade platform with four games spanning 2D and 3D genres at the Devhacks hackathon.
- Implemented real-time multiplayer game state synchronization using Socket.io and Express.js.
- Designed 3D game rendering and interactions using Three.js, with MongoDB for persistence.
